

A router is required for a 200Mbps China Unicom fiber optic connection

Article Overview

For a 200Mbps fiber optic connection, a dual-band or Wi-Fi 6 router with speeds above 1Gbps and good coverage is ideal.

Recommended Router Types

For a 200Mbps fiber connection, you don't need the absolute fastest Wi-Fi 7 routers, but you should choose a router that can handle speeds well above 200Mbps to ensure stable performance across multiple devices. Look for:

- Dual-band or tri-band routers: These provide separate 2.4GHz and 5GHz bands, reducing congestion and improving performance for multiple devices .
- Wi-Fi 5 (802.11ac) or Wi-Fi 6 (802.11ax): Wi-Fi 6 is preferred for future-proofing, better efficiency, and handling multiple devices simultaneously .
- Gigabit Ethernet ports: Ensure the router has at least one WAN port and multiple LAN ports for wired connections, which is useful for gaming or streaming .
- MU-MIMO and QoS support: These features help manage multiple devices and prioritize bandwidth for high-demand applications .

Specific Router Recommendations

- TP-Link Archer A7 – Dual-band Wi-Fi speeds up to 1750Mbps, suitable for 200Mbps connections, budget-friendly, and reliable for home use .
- NETGEAR Nighthawk R6700 – Dual-band, 1750Mbps, three external antennas for better coverage, ideal for streaming and gaming
