

Can distribution boxes be customized

Article Overview

Yes, distribution boxes can be fully customized to meet specific electrical, operational, and environmental requirements.

Tailored Design and Functionality

Custom distribution boxes allow you to specify circuit layout, cable entry points, panel size, and internal component arrangement, ensuring a perfect fit for your project and installation site . They can include main distribution, control, and protection functions, and can be designed for indoor or outdoor use, with considerations for humidity, dust, and temperature .

Material and Protection Options

You can choose from high-grade materials such as stainless steel, aluminum, or specialized plastics, and select fire-resistant, corrosion-resistant, or waterproof ratings like IP65/IP66 for harsh environments . This ensures durability and safety in extreme conditions.

Modularity and Scalability

Custom boxes often feature modular designs, allowing easy addition or removal of functional modules, future expansion, and simplified maintenance without costly retrofits . This flexibility is particularly useful for industrial, commercial, and renewable energy applications
