

Communication Optical Cable Dismantling and Pricing Version

Article Overview

The cost of dismantling communication optical cables depends on labor, equipment, and scrap value, typically ranging from a few dollars per foot for labor to additional revenue from recycled materials.

Labor and Equipment Costs

Dismantling fiber optic or communication cables requires skilled labor to safely remove cables without damaging infrastructure. Costs are influenced by cable type, installation environment (underground, aerial, or inside buildings), and accessibility. Labor includes fault locating, splicing, testing, and handling protective enclosures, with specialized tools such as fusion splicers, OTDRs, and power meters often required for safe removal and preparation for resale or recycling. Typical labor rates for cable removal can vary widely depending on region and project complexity. For standard accessible runs, labor may cost \$1–\$5 per foot, while more complex or hazardous locations can increase costs significantly.

Scrap Value

Salvaging cables can offset dismantling costs. Communication cables often contain copper or aluminum conductors and, in the case of fiber optic cables, glass fibers. The scrap value depends on the metal content and current market prices. As of early July 2026, scrap copper wire from communication cables is actively traded, and local scrap yards can provide rates based on quantity and quality. Bulk removal from da...
