

Distance between cable trays and process pipelines

Overview

11 Minimum Distance between process pipe surface and cable tray in parallel run shall be 300mm. 12 Cable tray system shall not be used where subject to severe physical damage. Cable trays and pipes work together to manage the flow of electricity, fluids, and gases, with cable trays primarily supporting electrical cables, and pipes. When cable trays are installed together with process pipe racks, the cable trays should be arranged on one side of the pipe rack. If unavoidable, the distance. 1. 0 This method statement will serve as a minimum guideline to carry out the Cable Tray Installation activities for commercial buildings, plants and refineries in accordance with Project Drawings and Specifications.
