

Distribution Box Size Configuration and Price

Article Overview

Distribution boxes vary in size, type, and price depending on application, amperage, number of circuits, and mounting style, with residential units starting around \$30-\$100 and industrial units costing significantly more.

Sizes and Types

Distribution boxes, also known as electrical distribution boards or consumer control units, come in residential, commercial, and industrial sizes. Residential boxes typically support single-phase or three-phase systems with 12 to 42 circuits, while industrial boxes may handle medium-voltage systems and include custom enclosures for PLCs, relays, and contactors. Standard physical dimensions vary, with boxes ranging from small flush-mounted panels to large wall-mounted or outdoor enclosures. Some common types include:

- Single-phase residential panels: 32-63A, flush or surface mounted, 1-12 ways.
- Three-phase commercial/industrial panels: 100-400A, multiple ways (up to 36 or more), often pre-wired and IP-rated for outdoor use.
- Specialty retrofit boxes: Designed for easy installation in existing walls or sub-floors, often with fire ratings and waterproofing.
