

RoHS Rack and Cabinet Type

Article Overview

RoHS-compliant racks and cabinets are available in various types including floor cabinets, wall cabinets, open-frame racks, subracks, and modular knock-down designs, all designed to meet environmental and safety standards.

Overview of RoHS Compliance

RoHS (Restriction of Hazardous Substances) compliance ensures that racks and cabinets are manufactured without hazardous materials such as lead, mercury, cadmium, and certain flame retardants, supporting environmental safety and regulatory adherence. Many manufacturers also ensure REACH compliance, confirming that restricted chemicals are not present above threshold levels.

Common Types of RoHS-Compliant Racks and Cabinets

1. Floor Cabinets

- Typically 19" wide, designed for server, telecom, or industrial equipment.
- Can be fully enclosed with solid, louvered, or windowed doors.
- Often include adjustable mounting rails and cable management features.
- Example: REFK Series knock-down cabinets with 1000 lb capacity, adjustable EIA-310 compliant rails, and textured powder coat finish that is RoHS-compliant.

Wall Cabinets

- Smaller, mounted on walls for space-saving installations.
- Suitable for network switches, patch panels, or small industrial electronics.
- RoHS-compliant wall cabinets are available in both metal and aluminum construction.
