

Specifications of iron cable trays in Kyrgyzstan

Article Overview

Iron cable trays in Kyrgyzstan typically follow international standards for steel construction, offering ladder, perforated, solid-bottom, and channel types with various protective coatings.

Types of Iron Cable Trays

- Ladder Type: Consists of two side rails connected by rungs, providing maximum ventilation for heat-producing cables such as power lines. Ideal for long cable runs and heavy-duty applications .
- Perforated Type: Fabricated from roll-formed steel with perforations on both sides, offering protection while allowing ventilation for sensitive control or telecom cables .
- Solid-Bottom Type: Enclosed trays made from single metal sheets, protecting cables from heat, humidity, corrosion, and physical damage .
- Channel Type: Used for aesthetic or light-duty applications, often with ventilated or solid bottoms .

Material and Coatings

- Steel Grades: Hot-rolled or cold-rolled carbon steel, structural quality, high-strength low-alloy steel (ASTM A1011, ASTM A1008) is commonly used .
- Protective Coatings: Hot-dip galvanization (ASTM A123), pre-galvanized steel, powder coating, or painted finishes to prevent corrosion .
- Electrodeposited Zinc Coatings: ASTM B633 compliant for additional corrosion resistance
