

Three-level distribution box empty cabinet for construction site use

Article Overview

A three-level distribution box empty cabinet is a tiered, rainproof, and customizable electrical enclosure designed for temporary power distribution on construction sites.

Structure and Levels

A three-level distribution box system is designed to manage temporary power efficiently on construction sites. It consists of:

- First-level (main) cabinet: Acts as the primary hub, connecting to the power input. It typically features bottom-in and bottom-out lines, a copper busbar for reliable contact, a measuring system, and a rainproof top suitable for outdoor use .
- Second-level (sub) cabinet: Installed under the main cabinet, often with inner and outer doors, spray-painted exterior, and a rainproof top. It redistributes power to multiple switch boxes .
- Third-level (final) cabinet: Serves as the junction box for individual electrical appliances. It can be fixed or movable and includes leakage protection switches to ensure safety .

Materials and Design

Construction site distribution cabinets are commonly made from cold-rolled steel plates or fiberglass/polyester, providing durability and resistance to outdoor conditions . Key design features include:...
